

- **New generation of Smart robots** with high repeatability up to 0.05 mm
- **SMART Glueing application software** to optimise precision and quality of sealing with all the parameters used on the process as: linear speed of the robot, selection of glueing programs, etc. with dedicated graphic interface.
- **Real-time adaptation** of the dispensed material in function of the robot speed
- **100% sealing capabilities:** structural adhesives, hot melts, body sealers, anti-flutter mastic, hem flange adhesive, after hem sealing (cosmetic)

Advantages:

- Increased product quality due to the automated process precision
- High repeatability
- High throughput
- Precision in component positioning
- Real time adjustment of the bead volume controlled according to the robot speed
